

Workshop on 3D active close-proximity hyperspectral imaging of crops

University of Sheffield, 12-13 September 2016

This workshop aims to bring together researchers from the plant & crop science, phenotyping and engineering communities, to develop ideas for a low-cost, 3D, active, close-proximity hyperspectral imaging unit.

The outputs from the meeting will include a prioritised wishlist for a low-cost imaging unit and defined partner groups for future proposals.

Early career researchers and PhD students are particularly encouraged to attend.
